

## TASK 1

Name: Sujitha Perumal

## AJAX

The image shows a Notepad++ editor window titled 'ajax - Notepad' with the following HTML and JavaScript code:

```
<!DOCTYPE html>
<html lang="en">
<body>

<button id="loadDataBtn">Load Data</button>

<div id="result"></div>

<script>
function loadData() {
    fetch("http://localhost:3000/seller").then(response => {
        if (!response.ok) {
            throw new Error('Network response was not ok');
        }
        return response.json();
    })
    .then(data => {
        document.getElementById('result').innerText = JSON.stringify(data, null, 2);
    })
    .catch(error => {
        console.error('Fetch error:', error);
    });
}
document.getElementById('loadDataBtn').addEventListener('click', function () {
    loadData();
});
</script>
</body>
</html>
```

Below the editor is a web browser window showing the result of the AJAX request. The browser has tabs for 'Intranet', 'ajax.html', 'localhost:3000/seller', and 'Swagger UI'. The address bar shows 'File | C:/Users/sujitha.perumal/Documents/ajax.html'. The page content displays a 'Load Data' button and a JSON response:

```
{
  "name": "sharmila",
  "email": "sharmila14@gmail.com",
  "password": "sharmila@123",
  "id": "1"
},
{
  "name": "sujitha",
  "email": "sujitha14@gmail.com",
  "password": "suji@123",
  "id": "2"
}]
```
